Although AutoCAD is not the only CAD software program, it is the dominant CAD application in the global market, including in both professional and home users. According to IHS iSuppli, in the first quarter of 2018, AutoCAD had a market share of 58.2%, and Accelium estimates a global market share of 60.0% for AutoCAD by the end of 2018. The first version of AutoCAD was released in December 1982, and the latest major version is 2020. History In October 1982, after working for General Electric for 3 years, Bart Massey, vice president of innovation at Autodesk, decided to develop a new CAD program that would operate on desktop microcomputers. The program would be a true CAD tool for microcomputers instead of using standard mouse and keyboard input. Because the program was intended to operate on microcomputers that typically only had 16 K of memory, the program had to be small and simple. To accomplish this, Massey developed a system where the user would manipulate the 2D screen using the mouse. By moving the cursor around, the user could create objects, work on them, and then delete them. In contrast, other commercially available CAD programs used a keyboard and mouse to interact with the screen. On the other hand, some of these programs were capable of outputting a bitmap image, which could be drawn on a paper plotter, a primitive form of graphic printer, but this method could not produce high-resolution, photographic-quality images. Massey estimated that the original program, which was named "AutoCAD", would be ready by the end of 1982, in time for the launch of Apple Computer's Macintosh computer. Initially, Massey
